

# IMPORTANT INFORMATION: YOUR DRINKING WATER SERVICE LINE LEAD STATUS IS UNKNOWN

The Village of Warwick has not yet identified what your service line is made of. All or a part of your service line may be made of lead.

## What is a Lead Status Unknown Service Line?

A service line is the pipe connecting the water main to the building inlet. A typical configuration of a service line is shown in the figure. The Village owns the service line from the water main to the curb stop and property owners own the service line from the curb stop to the building inlet. When any section of the service line material is unknown, we need to categorize it as a lead status unknown service line.

**Example of a Service Line** If a system doesn't know a material for the entire length of the service line, it is the lead status unknown service line.

## What Does It Mean?

We don't know what your service line or portion of it is made of. Until we can confirm that the entire length of your service line is not made of lead, we will continue to provide information about lead in drinking water once a year, so you can take precautionary measures to minimize your potential exposure to lead in drinking water.

## Source of Lead in Drinking Water

Lead enters drinking water from a lead service line and indoor plumbing materials such as lead solder on copper pipes and chrome-plated brass or brass fixtures and faucets.

## Health Effects of Lead

*\*Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these*

*adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.\**

## **Steps You Can Take to Reduce Your Exposure to Lead in Drinking Water**

- **Use your filter properly.** Using a filter can reduce lead in drinking water. If you use a filter, it should be certified to remove lead. Read any directions provided with the filter to learn how to properly install, maintain, and use your cartridge and when to replace it. Using the cartridge after it has expired can make it less effective at removing lead. Do not run hot water through the filter. For more information on facts and advice on home water filtration systems, visit EPA's website at <https://www.epa.gov/ground-water-and-drinking-water/home-drinking-water-filtration-fact-sheet> and EPA's [Consumer Tool for Identifying Drinking Water Filters Certified to Reduce Lead](#).
- **Clean your aerator.** Regularly remove and clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Use cold water.** Do not use hot water from the tap for drinking, cooking, or making baby formula as lead dissolves more easily into hot water. Boiling water does not remove lead from water.
- **Run your water.** The more time water has been sitting in your home's pipes, the more lead it may contain. Before drinking, flush your home's pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes. The amount of time to run the water will depend on whether your home has a lead service line or not, as well as the length and diameter of the service line and the amount of plumbing in your home. Residents may contact us at **845-986-2031 (Ext. 105)** or [waterbilling@villageofwarwick.org](mailto:waterbilling@villageofwarwick.org) for recommendations about flushing times in their community.
- **Learn what your service line material is.** Contact us at **845-986-2031 (Ext. 105)** or [waterbilling@villageofwarwick.org](mailto:waterbilling@villageofwarwick.org) or a licensed plumber to determine if the pipe that connects your home to the water main (called a service line) is made from lead, galvanized, or other materials. The Village is currently in the process of identifying all of the service lines in the community and you will be notified if your service line is found to be lead or galvanized requiring replacement. [Protect Your Tap: A quick check for lead](#) is EPA's on-line step by step guide to learn how to find lead pipes in your home.
- **Learn about construction in your neighborhood.** Contact us at **845-986-2031 (Ext. 105)** or [waterbilling@villageofwarwick.org](mailto:waterbilling@villageofwarwick.org) to find out about any construction or maintenance work that could disturb your service line. Construction may cause more lead to be released from a lead service line if present.
- **Have your water tested.** To have your water tested and to learn more about the lead levels in your drinking water you can reach out to the Orange County Department of Health who can direct you to local approved water testing laboratories.

## **Get Your Child Tested to Determine Lead Levels in their Blood**

Although there is no confirmation of having a lead service line, you may wish to speak with a healthcare provider to see if your child's blood lead level is elevated and/or if there is a need for blood testing, if you are concerned about potential exposure. For more information on these actions, please visit <https://www.cdc.gov/nceh/lead/advisory/acclpp/actions-blls.htm>.

## **Opportunities to Verify Your Service Line Material**

We are currently working with many different verification methods to identify all of the service lines in the community. If you would like to help with the verification process and identify your own service line, scan the QR code or visit the link below and follow the instructions on the survey.

### **Survey QR Code and Link:**

**<https://surveyking.com/w/mb1utv6>**

We are also responsible for maintaining an inventory of all service lines, so keep us updated if your service line changes.

**If you have any questions about your service line, contact us at 845-986-2031 (Ext. 105)  
or [waterbilling@villageofwarwick.org](mailto:waterbilling@villageofwarwick.org) or visit our website at:**
